

790' to Shore Road poles follow drive for most part

below average quality formerly year round residents now seasonal use only

remodeled medium size camp

drive to camp

Good quality yr round homes seasonal residents however use year round

c. 300' this leg

Shore Road

2 small older camps

If spur goes in as far as indicated then Spur should at least go to a pole within 500' of remodeled camp. But maybe spur should only go to new house.

New house seasonal residents

drive to camps

DeCarlo Way

power line travels through woods

Based on data to date not sure best way get fiber optic to these camps

800'

New house not complete

c. driveway

c.600

This area highlights an issue that needs to be addressed. When should a spur go up a private road, how far and if it doesn't what are the cost consequences in the future. In this area there is a spur going up the first private drive but none goes up DeCarlo. Currently all on the first drive are seasonal and not used in the winter while at least 2 on DeCarlo are used some during the winter. I am not arguing either way just observing that this seems inconsistent here.

Pole
